

Q Given 2 strings A & B.

== Check if they are anagrams. ??
==

Anagrams: 2 strings A & B are said to be anagrams if they are permutations of each other.

<u>Ex</u>	A	B	
	tac	cat	✓
	ayush	sayud	✗
	madam	dadma	✗

Solⁿ 1) Sort both the strings & compare

T.C. = $N \log(N)$
S.C. = $O(1)$

2) If Distinct chars

⇒ Take XOR of all chars of A & B

if 0, return true

else return false.

A:

a a b b c

1

B:

c c f f c

1

0

Small Case = $O(26)$

$$S_{\text{mell}} + C_p = 0 \text{ (SE)}$$

Create 2 HashMaps ($hm1 \neq hm2$)

for (char a: → z) {

$$T.C = O(N + N + \frac{26 \times 52}{52})$$

$$S.C. = \underline{\underline{0(1)}}$$

$$A = \begin{matrix} & 97 & 98 & 99 \\ \begin{matrix} a & b & c \end{matrix} \\ \hline \end{matrix}$$

$$B = \frac{b}{98} \frac{c}{99} \frac{a}{97}$$

$$\cancel{94}^a \cancel{98}^b \cancel{99}^c \cancel{98}^b \cancel{99}^c \cancel{97}^a = \underline{\underline{0}}$$

Q Given 2 strings A & B. ($N \geq M$)
 \downarrow \downarrow
 N M

Count the no. of substrings of A
 which are anagrams of B.

Eg: A: a b c a c c b a b c a c
 $N=12$
 B: a b a c c
 $M=5$
 Sliding window of size M

	A		B
0-4	a b c a c	✓	a b a c c
1-5	b c a c c	✗	
2-6	c a c c b	✗	
3-7	a c c b a	✓	
4-8	c c b a b	✗	
5-9	c b a b c	✗	
6-10	b a b c a	✗	
7-11	a b c a c	✓	

Ans = 3

1) Sliding Window + 2 HM

B: a b a c c

HM: { a: 2, b: 1, c: 2 }

A: a b c a c c b a b c a c
 0 1 2 3 4 5 6 7 8 9 10 11

	Add	Remove	Output	HM
<u>0 - 4</u>			✓	{ a: 2, b: 1, c: 2 }
<u>1 - 5</u>	<u>5</u>	<u>0</u>	X	{ a: 1, b: 1, c: 3 }
<u>2 - 6</u>	<u>6</u>	<u>1</u>	X	{ a: 1, b: 1, c: 3 }
<u>3 - 7</u>	<u>7</u>	<u>2</u>	✓	{ a: 2, b: 1, c: 2 }
<u>4 - 8</u>	<u>8</u>	<u>3</u>	X	{ a: 1, b: 2, c: 2 }
<u>5 - 9</u>	<u>9</u>	<u>4</u>	X	{ a: 1, b: 2, c: 2 }

H.W.

Try the code for this problem.

T.C. =

initial value of e = m-1 s
 final = N-1 c

$$(N-1) - (M-1) + 1$$

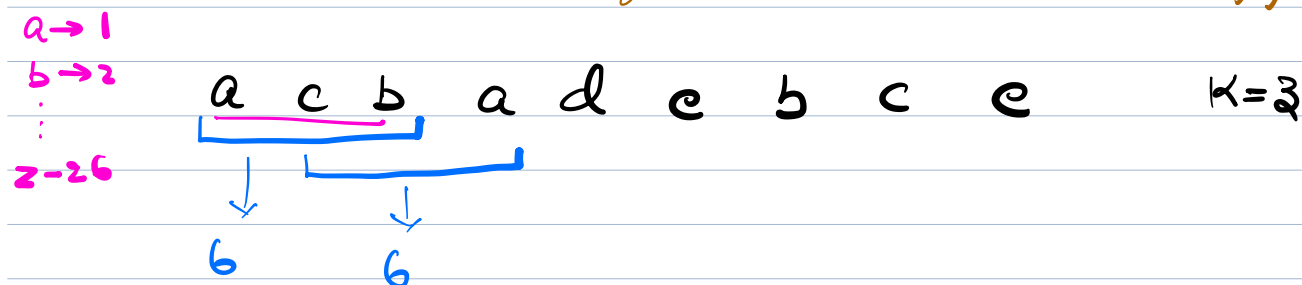

$N \geq M$

$$\underline{N-M+1} \times O(26) + \underline{M+M}$$

$$\underline{O(N)}$$

Q Given a string of length N .

Return the sum of ASCII values of every substring of length K (Return array)

Sliding Window

① Window size should be fixed

② Ans of next window can be found by removing & adding something to the current answer.

Q Find a given pattern in a large text

(N)
Text: a b c x y c l m o x y c l j p z x y c m k r t x y c l

Pat: x y c l

(M)

Brute Force

$$T.C. = O(N \times M)$$

$N \leftarrow \{ \text{abcn}, \text{bcng}, \text{cxgc}, \text{xycl}, \text{yclm} \dots \}$

$M \leftarrow \{ \text{xycl} \}$

Annotations: Red circles around 'abcn' and 'xycl'. Red arrows point from 'abcn' to 'int' and from 'xycl' to 'int'. A green arrow points from 'xycl' to 'bcng'.

$$T.C. = \underline{O(N \times M)}$$

$N \leftarrow \{ 71, 81, 50, 69, 59, 12, 7 \dots \}$

12

$$\underline{O(N)}$$

Comp of 2 similar string = $O(\text{length})$

" " 2 integers = $\underline{O(1)}$

1) Sum of ASCII values

a b c

→

$$97 + 98 + 99 = \underline{\quad}$$

(N)

Text: abc ~~xycl~~ mo xycl ; p q x y c m k r t xycl

Pat:
(M)

xycl

Sum of
ASCII
values

ag

ag
97 + 97

bb
98 + 98

1) If sum of ASCII values of pat \neq
sum of ASCII values of subtry
 \Rightarrow Definite mismatch

2) If the values match.
then compare char by char

Best Case \Rightarrow T.C. = $O(N)$

Worst Case \Rightarrow T.C. = $O(N \times M)$

Collision
