

- 1) $\text{Enqueue}(x) \rightarrow$ Insert x in the queue
- 2) $\text{Dequeue}() / \text{poll}() \rightarrow$ Removes the first ele. of queue
- 3) $\text{front}() \Rightarrow$ Returns the value of 1st ele of queue
- 4) $\text{isEmpty}() \Rightarrow$ Return True if queue is Empty else false

$$\text{T.C.} = O(1)$$

Implementation

1) Arrays.

2) Linked List

Implement a queue using only stacks

Enqueue(n)

Dequeue()

> O(1)

push
pop
top
is Empty

5, 4, 9, 7, 10, ^{dq} dg, 11, 12, 13, dg, dg, dg

S1

S2

11

9
4
5

dg

$$1^{st} \text{ deg} = \underline{O(N)}$$

$$(N-1) \text{ deg} = \underline{1 \times (N-1)}$$

$$\downarrow$$

$$N \text{ degrees} = \underline{\underline{2N-1}}$$

$$\underline{\underline{1 \text{ degree}}} = O(2) = \underline{\underline{O(1)}}$$

Amortized

3 digits $\Rightarrow \{1, 2, 3\}$

Given N , return the N^{th} no. formed using these digits. $N=8$

Q

find the N^{th} perfect no.

- Digits : 1, 2
- Even length
- palindrome.

1, 2, 11, 12, 21, 22, 111, 112, 121, 122, 211, 212, 221, 222, 1111, 1112, ...

1 2	2 1
2 1	1 2
2 2	2 2
1 1 1	1 1 1

$O(N)$

Q

Given a queue.

Reverse the queue.

2, 3, 5, 9, 1, 8, 7

↓

7, 8, 1, 9, 5, 3, 2

⇒ Dequeue the entire queue in a stack

⇒ Enqueue the stack back.

T.C. = $O(N)$
S.C. = $O(N)$

BODMAS

$$4 + (8 \times 7) \Rightarrow \frac{4}{\uparrow} + \frac{87 \times}{\uparrow} \Rightarrow 4 = \underline{8} \underline{7} \underline{\times} +$$

$$\begin{array}{lcl} A \times B & \rightarrow & AB \times \\ A \div B & \rightarrow & AB \div \\ A + B & \rightarrow & AB + \\ A - B & \rightarrow & AB - \end{array}$$

$$\begin{array}{c} \text{④} \quad \text{⑧} \text{⑦} \underline{\underline{\times}} + \\ \text{4} \quad \underline{\underline{56}} \quad \text{④} + = \text{⑥0} \end{array}$$

$$\begin{array}{c} \text{7} \quad \text{④} \text{②} \underline{\underline{-}} / 6 \times 9 + \\ (4-2) \\ = \text{②} \end{array}$$

$$\text{⑦} \text{②} \underline{\underline{/}} 6 \times 9 +$$

$$\text{⑩} \text{⑥}$$

$$18 \ 9 \text{④} = \text{②7} \text{⑦}$$

⇒ Stack

H.W.

Code

Doubt

$$\left(\frac{N}{B}\right)$$

~~1~~

$$B \geq 1$$

$$x \rightarrow \log(x)$$

B

$$\frac{N}{B}$$

$$\log\left(\frac{N}{B}\right) \approx 9$$

$$\log\left(\frac{N}{B}\right)$$

$$\frac{N}{B}$$

Code

Deque < INT > Q

$N \leq 3$ { return N }

count = 3

while (count < N) {

int x = q.dequeue();

for (i = 1; i <= 3; i++) {

int next = x * 10 + i
count ++;

if (count == N) {
return next;

}

q.enqueue(next);

}
